

Get Started

Follow the instructions below before you start using GUNNPOD RX

Ensure you carefully follow all instructions given to you by your prescriber. If you are unsure or do not understand how to use your device, consult your doctor or pharmacist for guidance.

Remove Gunnpod RX pod from the sealed packaging

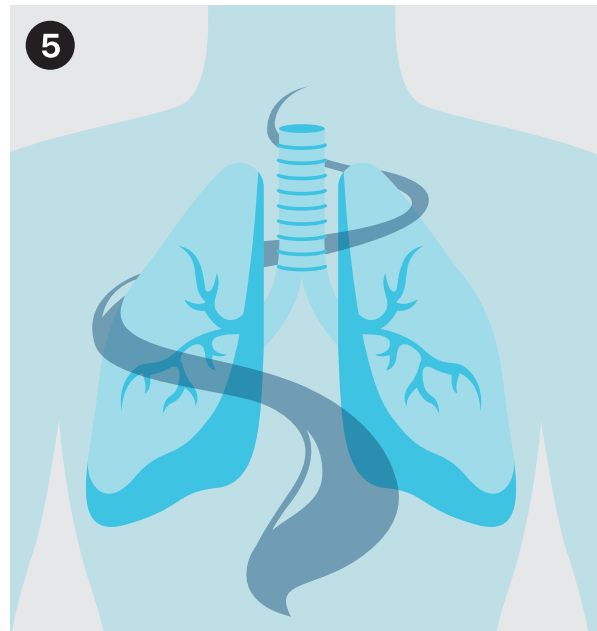

Remove the silicon seals from the mouthpiece and the bottom of the pod.

Insert pod into GPRX 650 Device

Place the mouthpiece against lips.

Inhale the vapour fully. (Do not swallow it)

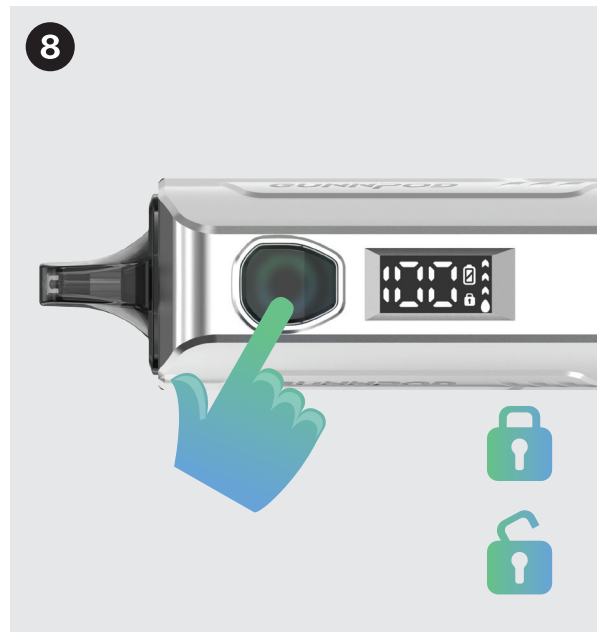

Exhale

The blue light at the bottom of the device will light up when inhaling.

If the blue light is blinking, it indicates low battery.

If there is no blue light, the battery is empty. Charge now to resume use.

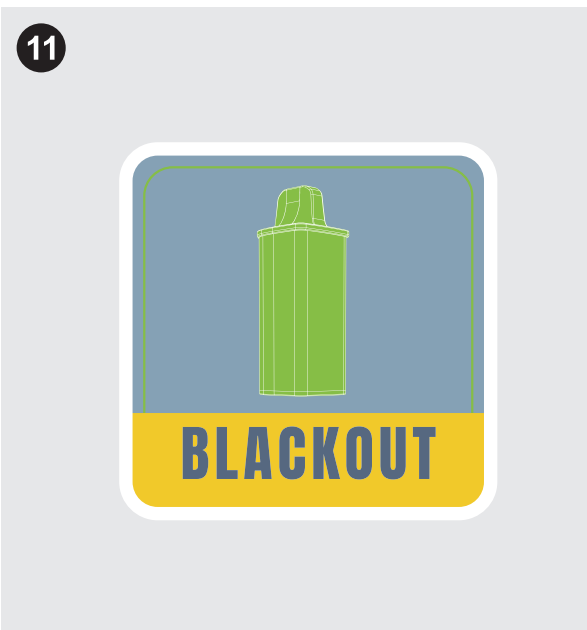

Tap the device button 3 times to activate the Child Lock system. To deactivate, tap the button 3 times again.

You will know that Gunnpod RX pod is empty when there is insufficient liquid in the pod.

Use a cotton swab with isopropyl alcohol to clean the mouthpiece and bottom air intake outlet and then dry it thoroughly. This will prevent any residue build-up.

Keep Gunnpod RX pod sealed in its packaging until required for use.
